TITLE: Magnetometer with film Hall generator operating at liquid helium
temperature 15

SOURCE: Pribory i tekhnika eksperimenta, no. 1, 1965, 223-226

TOPIC TACS: magnetometer, Hall generator

ABSTRACT: A magnetometer is briefly described which is based on a mercury-selenide d-c film Hall generator. The instrument is intended for measuring the currents in closed superconducting circuits and permits detecting magnetic fields as weak as 0.05 oe. At 1 oe, the instrument error is 1%. The Hall-generator sensitivity to magnetic field, 0.15 μ V/oe-ma; to control current, 0.0014 μ V/
ma². "The authors wish to thank R. S. Popovidi for his/her help in the work."

TITLE: Disruption of superconductivity in thin films by current pulses
21.44.55

SOURCE: AN GruzSSR. Institut fiziki. Elektronnyye i ionnyye protsessy v tverdykh telakh, v. 1, 1964, 90-93

TOPIC TAGS: superconductivity, metal film, ~~critical point~~, tin, electric current

ABSTRACT: The authors conducted a series of experiments on using current pulses to destroy superconductivity in thin films of tin. A pulse duration of 1-1000 usec was used in the 3.81-3.67°K range. The metal films were vacuum deposited on mica substrates. A series of square pulses was applied to the specimen at 4.2°K and the voltage drop across the resistance of the film was amplified and fed to an oscillograph. The temperature of the specimen was gradually lowered by evaporation of liquid helium to the point of transition to the superconductive state. At this temperature, the amplitude of the current pulses passing through the specimen is just

Card 1/2

56

8+1

L 13870-66
ACC NR: AT6003163

sufficient for full restoration of the resistance of the specimen, i.e. I_{cn} . The temperature was then held constant and the amplitude of the current pulses was gradually reduced. The signal on the oscillograph was plotted as a function of current amplitude. These data were used for determining the relationship between the reduced resistance R/R_n as a function of current amplitude I . It is found that

$$R/R_n = h/H \times I_{cn}/I,$$

where R_n is the resistance of the specimen in the normal state; R is the resistance of the specimen restored by a pulse of magnitude I ; I_{cn} is the critical amplitude which corresponds to complete transition to the normal state; h is the value of the signal on the oscillograph which corresponds to current amplitude I and resistance R ; H is the value of the signal on the oscillograph which corresponds to the normal state of the specimen. It is found that longer current pulses reduce the transition range and the final critical current. A table is given showing the values of the initial and final critical currents and the transition intervals for various temperatures and pulse durations. Even the longest current pulses did not produce the ideally sharp avalanche transition which is observed when direct current is used for destroying superconductivity although the process is clearly nonisothermal in the case of long current pulses. Orig. art. has: 1 figure, 1 table.

TITLE: An Evaluation of the Quality of Moscow Leather
(Otsenka kachestva yuftevoy kozhi)

PERIODICAL: Standartizatsiya, 1958, Nr 6, pp 61-62 (USSR)

ABSTRACT: The correct grading of Moscow leather as to chemical and physical-mechanical properties depends on the sample taken. The State Standard GOST 938-45 for testing Moscow leather was developed 13 years ago. Since that time considerable technological progress has been made. New values should be established. Tests made have shown that the resistance in air-dried samples is 7.4-11.6% higher than in wet samples. The lengthening under a stress of 1 kg/mm² is in dry samples 12.5-20% lower than in wet ones. The quality of leather can be best determined by taking samples of rump leather, as mentioned in GOST 938-45.

The booklet is devoted to the question of perfecting open-pit coal mining technique, and further development of the theoretical bases of mining science. It describes variants of the method of opening up deep layers of Korkinskoy coal beds; also methods of computing the main mining parameters of open pits for conveyor transportation of coal, and gives a detailed basis for the selection of systems of working the Raychinskiy lignite beds.

The booklet is intended for technical-engineering workers of open pit coal mines.

TITLE:

On the Choice of Electric Locomotives for Opencast Mining Operations (O vybore elektrovozov dlya otkrytykh gornykh razrabotok)

PERIODICAL:

Gornyy zhurnal, 1958, Nr 12, pp 43 - 46 (USSR)

ABSTRACT:

Different four-axle electric locomotives of foreign and Soviet make, presently used in opencast mines and quarries of the Union, have insufficient traction weight, insufficient motive power, and many structural defects. Both types are not equipped for the recuperative braking. After describing specific conditions under which the locomotives must be able to work, the authors determine the factors which must be taken into consideration when new locomotives are produced. Research conducted by the Institut kompleksnykh transportnykh problem AN SSSR (The Institute of Transportation Problems of the AS USSR) on the electrification of railways show, that with the use of a single-phase current of industrial frequency with the field intensity of 20 kilovolt in the contacting net, the capital expenditure will be 20 - 25% less than with the existing system of direct current of 3.3 kilovolt. Electric wide-gage locomotives

ORG: Transportation Machinery Plant, Khar'kov (Zavod transportnogo mashino-stroyeniya)

TITLE: Method of determining temperature fields of machinery-part surfaces inaccessible during operation

SOURCE: Inzhenerno-fizicheskiy zhurnal, v. 11, no. 4, 1966, 516-520

TOPIC TAGS: temperature, temperature dependence, temperature measurement, diffusion method, diffusion parameter, temperature field

ABSTRACT: A method is proposed for determining the temperatures and topologies of the temperature fields of objects which are inaccessible during operation. It is based on the use of the critical dependence of the diffusion parameters of materials on temperature. The method was tested on simple and complex multicomponent heterophase alloys over a wide temperature range (the lowest temperature was 200C). The alloys tested were 65G, Kh12M, Kh18N9T, EI283, and AK-4 grades, with partial reference made to parts of internal

AUTHOR: Shukhov, O.K., Candidate of Technical Sciences

TITLE: The Interaction of Carburetor Dosing Systems (O vzai-modeystvii doziruyushchikh sistem karbyuratorov)

PERIODICAL: Avtomobil'naya promyshlennost', 1959, Nr 3,
pp 19 - 20 (USSR)

ABSTRACT: The author discusses "The Interaction of Carburetor Dosing Systems" by S.Yu. Koz'min, published in Avtomobil'naya i traktornaya promyshlennost', 1957, Nr 9. This article was based on material obtained at the Saratovskiy institut mekhanizatsii i elektrifikatsii sel'skogo khozyaystva (Saratov Institute of Agricultural Mechanization and Electrification). The author has the opinion that S.Yu. Koz'min based his article on incorrect fact and therefore arrived at false conclusions, which might lead to errors of designers and experimental investigators working in the field of carburators. He mentions the following

Card 1/2

SOV/113-59-3-7/17

The Interaction of Carburetor Dosing Systems

carburetor types: K-25A, K-22G, K-82, K-21, K-75. The investigations, conducted by NAMI, showed that the interaction of carburetor dosing systems is very different from the one explained by S.Yu. Koz'min. Under conditions of throttling, with simultaneous work of the main dosing and the idling speed systems, the fuel mixture becomes lean at great throttle openings, due to the drop of fuel consumption thru the idling speed system. This "overcompensation" was established by D.A. Rubets, Candidate of Technical Sciences. There are 2 diagrams and 2 Soviet references.

10,000 copies printed.

Eds. (Title page): Sokolov, N.V., Professor and Larin, M.N., Doctor of Technical Sciences, Professor; Eds. (Inside book): Glikin, N.N., Docent; and Brushteyn, B.Ye., Candidate of Technical Sciences, Docent; Tech. Eds.: Uvarova, A.F.: and Sokolova, T.F.: Managing Ed. for Literature on Metal Working and Machine-Tool Manufacture (Mashgiz): Beyzel'man, R D., Engineer.

PURPOSE: This book is intended for students at vtuzes specializing in fields other than machine building.

COVERAGE: This is a textbook presenting basic data on the structure and properties of metals and alloys, as well as methods of producing and processing them. Such matters as casting, forging, welding, and heat treatment are discussed. Modern equipment for all types of metal treatment is described. The seven broad divisions of the book are: Metallurgy of ferrous and non-ferrous metals; essentials of physical metallurgy and heat treatment; casting; metal forming; welding; machining.

TITLE: Seminar on volumetric cold pressing

PERIODICAL: Kuznechno-shtampovochnoye proizvodstvo, no. 3, 1963, 48 - 49

TEXT: In December 1962, a seminar on volumetric cold metal forming was convened by the Moskovskiy dom nauchno-tehnicheskoy propagandy im. F. E. Dzerzhinskogo (Moscow House of Scientific and Technical Propaganda im. F. E. Dzerzhinskogo), the Forging and Pressing Section of the Moscow City NTO Mashprom and VDNKh USSR, in which 300 representatives of institutes and plants of Moscow, Leningrad, Minsk, Riga, and other towns participated. Professor A. D. Tomlenov read a paper on problems connected with the determination of stresses in volumetric cold pressing, Professor Yu. A. Geller presented extensive data on cold pressing steels, A. E. Pavaras reported on new low-deformable die steels, S. Ya. Vayler reported on investigations performed in the field of friction and lubrication in cold pressing at the Institute of Physical Chemistry of the Academy of Sciences of the USSR.

Seminar on volumetric cold pressing

ces USSR under the supervision of Academician P. A. Rebinder; Lecturer G. A. Navrotskiy reported on new automatic presses for volumetric cold pressing and A. M. Pavlik reported on the application of volumetric cold pressing at the Minsk Tractor Plant. Other papers on the subject of volumetric cold pressing were read by A. G. Reznikov, A. T. Oreshkin, V. P. Kadilin, I. A. Sauskan, V. B. Pokrovskiy, B. P. Boris, I. A. Novikov, S. A. Valiyev, S. A. Yelenov and R. I. Nepershin. The participants of the Seminar pointed out that, on the whole, volumetric cold pressing is still not widely applied at the plants of the Soviet Union.
